

TypeScript & Playwright Workshop

Three-Day Course Outline

Classroom GitHub Repo: https://github.com/yithril/Dexian_TypescriptAndPlayWright

Day 1: TypeScript Fundamentals

Target: Be comfortable reading and writing the TypeScript you'll see in Playwright tests.

Topics Covered

- What TypeScript is and why it is useful
- Setting up a TypeScript project
- Basic type annotations
- Writing and typing functions
- Union types
- Interfaces for objects
- Structural typing
- Enums

Lab

Hands-on practice writing TypeScript interfaces, typed arrays, and functions with typed parameters and return values.

Day 2: Introduction to Playwright

Target: Understand how a Playwright test is built, walk through real examples together, and introduce the shared Playwright lab.

Topics Covered

- Review of the Day 1 lab
- What Playwright is and why it is useful for test automation
- Setting up a Playwright project
- Anatomy of a Playwright test
- Locators and selectors
- Common actions, including click, fill, and navigate
- Assertions
- Example test scenarios on a sample web application
- Shared lab introduced

Day 3: Lab & Advanced Scenarios

Target: Continue the shared Playwright lab with in-class support, then review selected solutions and discuss advanced scenarios.

Topics Covered

- Shared lab continued from Day 2: writing Playwright test scenarios
- In-class lab time with instructor support available
- More advanced Playwright scenarios and techniques
- Group review and discussion of selected lab work
- Wrap-up and next steps

Daily Class Flow

Each class session is four hours. Participants have time for review, guided instruction, breaks, and heads-down coding

Opening Block	Review, questions, and introduction to the day's lecture
Lecture Block 1	First instructional section with examples and discussion
Break	
Lecture Block 2	Second instructional section with continued examples and guided practice
Lab Block	Final hour reserved for lab time and heads-down coding with instructor support
